The ability to write a disc from Windows Explorer was added in Windows Xp. The procedure was enhanced and improved when you move on to Win7.

Using Windows Explorer on XP to write to a CD

1) Insert a blank CD

2. Close any windows that might open.

When you add more, the files to the disc, they will be held in a separate are until the image is sent.

Note: In XP, there is no speed dialog for burning. This is a design defect.

If you had wanted to adjust the speed, that would have been done from the Windows Explorer. You would have right clicked on the CD/DVD drive and selected properties from the download tab.

From the properties dialog box select the recording tab. From the recording tab, you can select the recording speed you want. The problem with this, is that this takes control of the recording speed away from the other software that you may use to burn CDs.

CD Drive (D:) Properties 🔹 👔 🔀
General AutoPlay Hardware {No Pconfig } Recording
These settings determine how the Windows CD recording software writes files to this CD-R drive.
Desktop CD recording
Select this check box to record CDs by dragging files and folders to the CD-R icon on your computer.
Enable CD recording on this drive
Select a drive where Windows can store an "image" of the CD to be written. The image file may use up to 1 GB of disk space.
🥯 Local Disk (C:)
Select a write speed. Higher speeds take less time, but if they cause errors, select a lower speed.
Fastest 💌
Fastest 24X Dafter writing 16X
4× 2× 1×
OK Cancel Apply

Once you change it from fastest, all other burning software loses control. If you are doing this on someone else's machine, please remember to restore the CD's recording speed to Fastest.
